Training Details

Microbiological Studies including Drug Assay : Development of new drug requires extensive preclinical studies before the drug is approved for trials in humans. Microbiological studies form the initial part of preclinical testing. A hands on practical training on culturing of micro organisms, in vitro screening of drugs & testing of sterility would be an added advantage to the student in the field of research, quality control & production of formulation

Handling of Analytical Instruments : Analytical instruments form the core of any pharmaceutical industry. In order to easily get in the industry students must possess adequate knowledge on handling, maintenance and troubleshooting of such instruments. This training aims to provide adequate practical exposure to all the students and develop their understanding of these instruments.

Training Details

Clinical Trials and Data Handling: The course has been developed with extensive consultation with the clinical data management industry and is structured in a way so as to open up opportunities for students in the area of core clinical research as well as Clinical Data Management (CDM). The program is highly recommended for all individuals already working or planning to work with clinical data and other related health databases.

Pharmacovigilance: Pharmacovigilance also known as drug safety, is the pharmacological science relating to the collection, detection, assessment, monitoring, and prevention of adverse effects of pharmaceutical products. Pharmacovigilance is concerned with identifying the hazards associated with pharmaceutical products and with minimizing the risk of any disaster that may occur to patients. A candidate trained in basic concepts of Pharmacovigilance proves worthy for industries in managing drug and dose related issues.

Communication skills Training: Communication is the heart of every organisation. Everything you do in the workplace results from communication. Therefore good reading, writing, speaking and listening skills are essential if tasks are going to be completed and goals achieved.

Graduate Pharmacy Aptitude Test (GPAT) is a national level entrance exam conducted by All India Council for Technical Education (AICTE) every year as per the directions of Ministry of Human Resource Development (MHRD), Government of India. This test facilitates institutions to select suitable Pharmacy graduates for admission into the Master's (M.Pharmacy) program. The GPAT is a three hour computer based online test which is conducted in a single session. The GPAT score is accepted by all AICTE-Approved Institutions/University Departments/Constituent Colleges/Affiliated Colleges. A few scholarships and other financial assistance in the field of Pharmacy are also given on the basis of the GPAT score.

Graduate Record Examination (GRE) is a general test is the world's largest assessment program for graduate admissions. Individuals applying to graduate schools in order to pursue a Masters of Science (MS) or MBA particularly in US are required to take the exam. GRE also has subject tests, apart from the basic GRE exam. These subject tests help to make your application stand out from the rest by highlighting your subject knowledge and skill level of a particular subject. Each subject test is intended for those students who have a bachelor's degree in particular disciplines. The subject tests being offered currently are Biochemistry, Biology, Chemistry, Literature, Mathematics, Physics, and Psychology. The Graduate Record Examination (GRE) is a standardized test that is required to be taken by students seeking admission to graduate schools. The exam has been developed to evaluate the verbal, analytical and mathematical skills of the candidates.
